EDUCATION

Pandit Deendayal Energy University Gandhinagar, Gujarat
B.Tech in Computer Science and Engineering

July 2023 – May 2027
GPA : 9.19 / 10

WORK EXPERIENCE

Software Developer Intern, GreyCube Technologies

May 2026 – Present

Ahmedabad, India

- Built a **SaaS platform** to spin up and manage isolated **Frappe/ERPNext** Docker instances for multiple clients.
- Handled the full **bench lifecycle** so sites could be created, paused, or torn down without touching other clients.
- Created **meeting scheduling module** in Frappe where clients browse agent availability from an open ticket and book a meeting slot.

Freelance Software Developer, Copilot Data Solutions

June 2024 – December 2024

Pennsylvania, USA (Remote)

- Automated UI interactions on a POS software system using **Selenium**, eliminating manual data entry workflows.
- Integrated a **natural language layer** enabling text commands to trigger complex operations across POS modules.

PROJECTS

H2Cred – On-Chain Hydrogen Credit System

github.com/veer-mehta/h2cred

Solidity, Ethereum (Sepolia), React.js, Express.js, MongoDB

- Built a **blockchain** system on Ethereum to tokenize clean hydrogen output as **ERC-721 credits**, giving companies a verifiable way to back their **CSR claims** on-chain.
- Wrote **Solidity smart contracts** for the full credit lifecycle, making every transaction immutable without a central authority.
- Built a **React** frontend connected via **Ethers.js**, with an **Express/MongoDB** backend handling off-chain metadata.

Deep Q-Learning Agent for Card Game

github.com/veer-mehta/joqer-engine

Python, PyTorch, Reinforcement Learning, Lua, IPC

- Trained a **Double DQN Deep RL** agent over 20,000 episodes using experience replay and a target network for stable learning.
- Built a threaded **Lua-Python IPC bridge** so the game could query the trained network in real time without blocking.
- Designed **reward functions** so the agent naturally learned to exhaust discards before committing to a hand, with no hardcoded rules.

Encrypted & Distributed Cloud Storage over GDrive

github.com/veer-mehta/distributed-drive-client

Python, Google Drive API, OAuth 2.0

- Built a CLI tool that **splits, encrypts, and distributes** file chunks across multiple Google Drive accounts.
- Handled per-account **OAuth token management** and round-robin chunk distribution across accounts.
- Maintained **metadata registries** to support full file reconstruction, deletion, and folder management.

ACHIEVEMENTS & CERTIFICATIONS

- Qualified **GATE CS 2026** with AIR 7970 (96 Percentile).
- Competed at the national level in the **World Robot Olympiad (WRO)**.
- Core Game Development Member, **Encode Programming Club**, PDEU (2024–2025).
- Completed **Entrepreneurship and Incubation** certification from NPTEL, offered by IIT Bombay.
- Completed **Containerization and Virtualization with Docker** Course certification from DataCamp.

TECHNICAL SKILLS

Languages	Python, JavaScript, C/C++, Lua
Web & Backend	React.js, Node.js, Flask, Django, Frappe
Blockchain	Solidity, Ethereum, Ethers.js
Databases	PostgreSQL, MySQL, MongoDB
DevOps & Tools	Linux, Git, GitHub, Docker, WireGuard, Postman
ML & DS	PyTorch, NumPy, Matplotlib
